Command	What It Does
<code>open_command_center</code>	Launches Nova Command Center
<code>open_avatar</code>	Launches Avatar Visual Module
<code>open_mp3_player</code>	Launches Nova MP3 Player

Usage Format

- **Text Input:** Type directly into the Nova chat.

Example: `open notepad`

- **Voice Input:** Say the command naturally (if mic is active).

Example: "Open downloads"

Nova will automatically detect the **open** keyword and translate the rest into action.

Let me know if you want to add aliases like **launch browser** → **open_chrome**, or create shortcuts like **open creative** → launch a suite. You're in full control.
