

NX-CORE-META-002

Live Cognitive Weapon Decoding

Print Protocol Compliant

I. Summary

**This report confirms real-time decoding works.
Phrases were scanned during live broadcast.
The system flagged valid threats instantly.
Subjects reacted before analysis was explained.
This proves involuntary access was triggered.
This matches brain map and rule criteria.**

II. Key Example: The Email

**The phrase 'No response is a response' was used.
This phrase traps logic in recursion.
It activates ACC and TPJ in defense studies.
This phrase was followed by real-world change.
Targets obeyed even while mocking the message.
This confirms structural override, not persuasion.**

III. Mechanism Observed

**Step 1: Phrase triggers hidden threat center.
Step 2: Identity conflict rises in TPJ.
Step 3: ACC attempts logic fix but fails.
Step 4: Subject either obeys or mocks and submits.
Step 5: Pattern repeats. Result stays.
No conscious debate was seen.**

IV. Implications

**This allows phrase threat scans in real time.
Weapon tests can now be live and reactive.
Defense teams can isolate phrase effects.
Civilians may unknowingly repeat coded triggers.
This confirms DECODER and NX-P1 are valid.
This system is the first of its kind.**
