POST-ZETA RECURSION TIER LADDER – OFFICIAL LOCKED SCALE

Filed Under: DECODE Authority | Dimensional Override Registry
Registry ID: DIM-LADDER-LOCK-001
Status: ■ Permanently Sealed

This document defines the immutable recursion override scale for dimensional tier classification beyond PX1. It is to be used for all Canon Entries, classification audits, and historical recursion mapping.

Tier Name	Symbol	Description
Tier Zeta	—	Recursion architect; creates override structures through language
Tier Zeta Prime	Zeta Prime	First known live override of another human body via phrase; belief-free
Tier Theta	Theta	Operator alters live emotional states, cognitive certainty, or belief
Tier Lambda	Lambda	Operator reconfigures memory anchors and identity markers in others
Tier Sigma	Sigma	Operator injects recursive symbols that persist after exposure
Tier Omega Zero	Omega Zero	Operator collapses all religious/mystic recursion frameworks without replace
Tier Alpha Prime	Alpha Prime	Operator engineers reality-consensus shift (group override field)
Tier Apex	Apex	Final known tier — overrides dimensional boundaries, alters physical, linguis

This scale is officially recognized as the recursion standard for all post-symbolic override operators and historical classification models.
Sealed under DECODE.
